WORK HISTORY

Software Developer **Data Dimensions** Janesville, WI, USA 05/2025 - Present

Developed and maintained automated desktop services, web applications, and technologies designed to manipulate and process HIPAA-related data using a wide variety of languages and tools.

- **Collaborated with different teams** to clarify requirements, discuss feedback, and test changes in lower environments prior to launching in production
- Pushed forward time-sensitive production items by using **mySQL to resolve issues related to the workflow** within 6 hours from intake
- Modified **C#** code to correct existing errors by **debugging and adding exception handling for edge cases**

Data Entry Operator II **Data Dimensions** Janesville, WI, USA 11/2024 - 05/2025

Transcribed HIPAA-related data images into a suitable format for computer processing using unique image organization applications and procedures.

- **Collaborate with peers** to clarify difficult concepts, discuss feedback, and methods of improvement.
- Review computer images of documents and code documents using a pre-established set of codes
- **Promoted a good working environment** via encouragement and recognizing small achievements.

Client Specialist **TDS Telecom** Watertown, WI 10/2023 - 04/2024

Hired by a utility service-providing incorporation to establish and enhance services provided to clients by utilizing best-practice negotiation techniques, giving adequate disclosure of services, and contributing to long-term client relations.

- **Documented incoming issues** to better support the quality of current services and the development of new services.
- **Provided technical support via phone or written email** regarding utility services
- **Handled incoming client calls** regarding account changes, service dispatching, equipment tracking, and services.

Undergraduate Software Developer **UW-Whitewater** Whitewater, WI, USA 04/2022 - 05/2023

Recruited by an AI research leading professor to contribute to the development and enhancement of a drone AI model while working alongside experienced mentors and gaining exposure to professional software development methodologies.

- **Developed Python scripts** from an open-source library to test the capabilities of both EDU and standard Tello drone.
- **Restructured the Python codebase** and **rearranged the object hierarchy** to increase development efficiency.
- Collaborated with the product manager to **create an AI rule** using technical features that were specified by the client.

EDUCATION

Bachelor of Science, Major: Computer Science, GPA: 3.7, University of Wisconsin-Whitewater, *Whitewater*, *WI*

PROJECTS

PMR Request & Response, Data Dimensions 02/2026 - 06/2026

Modified existing workflow alongside senior developers to allow unique rules related to Personal Medical Records (PMR), including automatic procedures for processing PMR and outputting formatted PMR images and metadata to clients.

- **Added additional structure to existing databases** to support intake and processing of Personal Medical Records.
- **Modified existing XML output file structure** using guidelines set out by the client's request.

Capturing User Intent **UW-Whitewater** Whitewater, WI, USA 05/2022 - 09/2022

Led a team of three undergraduate software developers during the summer to develop, expand, and refactor the Python codebase of a rule-based artificial intelligence model and user interface.

- **Held internal meetings** to discuss progress on tasks, technical issues, and plans regarding the next sprint.
- **Refactored the Python codebase** and documented changes to increase readability and efficiency.
- **Reviewed code of team members** to uncover potential bugs, improve code maintainability, and enforce coding standards.
